

## List of Controlled Chemical Substances

The substances determined to be necessary by the JEOL Group have been added to this list by referring to the IEC 62474 Declarable Substance List (D27.00).

It is necessary to understand the content of substances of delivered items.

### 1) Control Categories

Control category	Description
Prohibited	The JEOL Group prohibits the use of these substances. Delivery of any items that includes them is prohibited.
Candidate (Candidate chemical substances planned to be prohibited)	The JEOL Group plans to prohibit the use of these substances for its products in the future. If any items include them, a switchover to an alternative that does not include them is required.
Controlled	The amount of these chemical substances included in materials, parts, etc. must be identified and controlled. (Chemicals that may be restricted are also included.) It is necessary to identify the inclusion of these substances in delivered items.

### 2) Reference Regulations

The codes in the "Reference Regulations" column are described in the table below.

Code	Country/region	Name of acts/regulations	Remarks	JAMP control standard
JP01	Japan	Act on the Evaluation of Chemical Substances and Regulation of Their Manufacture, etc.	Class I Specified Chemical Substances	LR01
JP02	Japan	Industrial Safety and Health Act		
JP03	Japan	Act on Rational Use and Proper Management of Fluorocarbons		
JP04	Japan	Act on Prevention of Radiation Hazards due to Radioisotopes, etc.		
JP05	Japan	Act on the Regulation of Nuclear Source Material, Nuclear Fuel Material and Reactors		
JP06	Japan	Act on the Promotion of Effective Utilization of Resources		

JP07	Japan	Act on the Protection of the Ozone Layer through the Control and Other Measures on Specified Substances and Other Substances

EU01 candidate substance	EU	Candidate substances to be added to EU RoHS		

### 3) Notes

“JEOL control numbers” are assigned by the JEOL Group.

English names of chemical substances (chemical substance groups) are the names used in IEC62474 and in some cases names adopted by laws and regulations.

Japanese names of chemical substances (chemical substance groups) are the names used in Chemical Risk Information Platform by the National Institute of Technology and Evaluation (NITE-CHRIP).

In some cases, the names are adopted by laws and regulations or those that are commonly used.

The hyphen (-) in the CAS RN® cell means that the CAS Registry Number® for the chemical substance is not clearly identified. In this case, the Japanese name may not be indicated.

In addition, a CAS RN® starting with a P is assigned through the pre-manufacture notice (PMN) of a new chemical substance as specified by the US Toxic Substances Control Act (TSCA).

CAS RNs® are used to "describe this document as a green purchase related document" in the "CAS Registry Number® (CAS RN®) Verified Partner Program" specified by the Japan Association for International Chemical Information (<https://www.jaici.or.jp/cas-custom-services/cas-rn-license/>).

The IDs in Section 5 "List of Controlled Chemical Substances" follow those defined in the IEC62474 Declarable Substances List. A hyphen (-) in an ID cell means that the item has been determined to be necessary and added to the list by the JEOL Group.

The IDs in Section 6 "List of Controlled Chemical Substances Annex" follow those defined in the IEC62474 Reference Substances List. A hyphen (-) in an ID cell means that the item has been determined to be necessary and added to the list by the JEOL Group.

If a "Chemical substance name" or "CAS RN®" cell of a certain chemical substance group indicates "Refer to annex", refer to Section 6 "List of Controlled Chemical Substances Annex". It clearly indicates chemical substance names and their CAS RNs®.

The first two digits of a four-digit code is the country code specified by ISO3166-1.

Dechlorane Plus is a trademark of Occidental Chemical Corporation (OxyChem), and it also is a chemical substance produced by OxyChem.

## 4) Glossary

The terms used in this document that should be clearly defined are as follows.

Term	Description
Inclusion	Inclusion of a chemical substance in a part or material of a product. This also includes cases in which a chemical substance is added, filled, mixed, or adhered. There are cases of unintentional adhesion or transition due to the manufacturing process as well as intentional inclusion.
Intentional addition	Intentional addition of a chemical substance for a product for the purpose of achieving a specific function or appearance, or a specific performance related to quality maintenance or improvement.
Impurities	Chemical substances, other than those have been added for the purpose of achieving specific performance for the final product form, which cannot completely be eliminated by the current level of industrial technology. This includes substances which are included in natural materials and cannot completely be eliminated by the current level of industrial technology in the refining process as a commercial material or substances generated during a synthetic reaction such as by-products or catalytic residues.
Weight percent (wt%)	A unit to indicate the proportion of a substance (ingredient) included in a specific material or liquid. The mass of the contained substance is divided by the entire object and multiplied by 100%.
